

Three-Zone Body Print® 609

Comfort and support as individual as your own Body Print.

Fabric Encased Coil Support System

6" high profile coils are precisely formed by computer control, then pre-compressed and inserted into premium Quantum™ lightweight fabric; each pocket is ultrasonically welded.

3-Zones of Posturizing Support

Support is added in the center third of the innerspring unit where body weight is highest. Center third band of support equalizes additional weight for uniform, deeply individualized comfort over the entire unit.

Undisturbed Sleep

Individually fabric encased coils *flex independently to prevent partner and motion disturbance*, and are naturally quieter, for a more peaceful, undisturbed night's sleep.

Contouring Support

Body Print® encased coil system is designed to conform to your individual body contours. Every part of your body is supported from head to toe to maintain correct spinal alignment.
